PALLETIN® YZ- P40

PALLETIN® YZ- HP60

- Layer stabilizing mechanism squares the primary and secondary layers before sweep-off
 - Four side container control with control setting front support bar during sweep-off
 - Four side tier sheet containment with friction plates and tier sheet grippers to eliminate tier sheet movement and downed containers
 - Variable frequency motor drives provide soft start, soft stop Operation
- We include these features as standard equipment on every U-PACK depalletizer. Because we believe that the performance of your line should be based on the efficiency of your equipment, not how many options your budget allows. Our customer support includes technical service, spare parts, operator training, and our commitment to customer satisfaction ...making U-PACK bulk depalletizers the reliable choice for all your bottle and container handling requirements.
